Description

For Assignment 3, you will *design a persuasive infographic around a topical theme (e.g. inflation; immigration; climate change)*. Pick something in the news, find some data about it, visualize the data, come up with a message, and create an infographic to share your message. There will be no need to do a write-up for this assignment, but you will be expected to show three successive iterations of your work, the first of which must be hand-sketched. This assignment will be worth **15% of the final grade**.

Marking

Your submission will be assessed based on the following four criteria:

- **Creativity:** As with everything else in this course, creative interpretations of this assignment are highly encouraged! Develop personas, use unconventional visualizations, etc. One of your goals with this assignment is to use a mix of visualization types to capture your audience's attention, so be please be creative!
- **Organization:** In laying out your work, you must organize its elements in a clear and consistent manner. Plenty of items have been shared throughout the semester that describe "best practices" for constructing visuals. Don't invent a new structure (unless warranted). Please follow design practices that well-respected designers have developed.
- **Quality:** Your ultimate goal with this assignment is to use the infographic to help make sense of recent data. Data visualization can often be seen as "alienating" to unfamiliar audiences, especially when encountered in such a new medium, so be aware of how an external audience might interpret your work. With this in mind, strive to produce award-quality visualizations that engage a wide audience. What you present needs to be clear, accurate, well-structured, and compelling.

Resources

- Here's **an example** (<https://learn.ontariotechu.ca/courses/35795/files/5422393?wrap=1>)  (https://learn.ontariotechu.ca/courses/35795/files/5422393/download?download_frd=1) of an A+

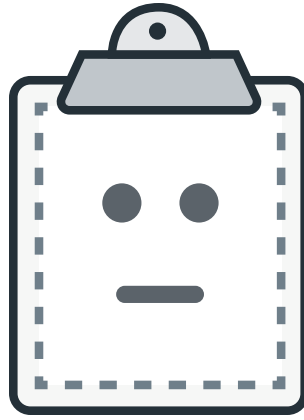

submission from last year.

Here are some “rules” you should consider any time you create an information graphic of your own:

- Spend time sketching your graphics! Plan them well.
- Know your audience and purpose. A business audience will read your infographic differently than a grade 4 class.
- Have a succinct but compelling headline/title.
- Don't overdo it with the graphics. Keep things simple.
- Also, don't overdo it with themes. Stay focused on one topic.
- Follow the same principles you'd use for a PowerPoint slide (e.g. 3 bullets per slide; limited text). Don't go overboard with too much text information. Show, don't tell! Focus on using visuals in your design to tell the story.
- That said, don't make it too long, too wide, or too dense. Have plenty of neutral background/negative space.
- Make sure your story flows.
- Have a consistent and constrained font and colour scheme (3-colour scheme is ideal). Contrast is important.
- Use a grid or wireframe to lay things out.
- You can mix different visualization types.
- If you use bar charts, make sure your baselines start at zero.
- Pie charts are fine in infographics, but don't overdo the number of slices.
- Use small multiples if you need to show all the data.
- Use labels that explain your encodings
- Make sure your data is accurate and properly sourced.
- Let the data tell the story.
