

Assignment 1

Sorbara

(Goals and Opportunities)

Afeena Gafoor

Current Challenge	Strategic Goal	Digital Opportunity	Value Created	Rationale
The acquisition process is fully reliant on one individual, creating a single point of failure and an operational bottleneck.	Strengthen operational resilience, effectiveness and efficiency in asset acquisition by reducing <i>individual-knowledge-based</i> processes	- Insight: End to end visibility of all stages of the acquisition lifecycle, from opportunity identification to asset acquisition - Insight/ Efficiency/Effectiveness: Identification and evaluation of market opportunities as they become available - Resilience: Ability to scale acquisition operations based on the company's growth and demands	Efficiency, Effectiveness, Insight, Resilience	To build a more efficient and robust organization, transitioning away from a single-person dependency for critical acquisition processes is essential. Moving toward a decentralized model provides the following strategic benefits: Operational Continuity: By eliminating a single point of failure, the organization ensures that operations remain stable and uninterrupted. Scalability and Growth: Removing person specific bottlenecks allows the volume and speed of acquisitions to scale based on the company's demand and not the ability of a single person. Knowledge Repository: Transitioning from "knowledge hoarding" to a transparent, shared knowledge base ensures that information is a company asset.

				4. Negotiating Stability: Establishing clear, documented processes prevents "salary leveraging" and ensures that compensation remains fair and market-driven, rather than being directed by a position of indispensable power. 5. Employee Retention: Distributing responsibilities prevents individual burnout and improves employee morale, creating a healthier work environment.
Manual timesheet data entry and payroll calculations increase the likelihood of errors, extends payroll processing times and limits transparency for off- site employees.	Strengthen the efficiency, effectiveness, and transparency of payment processes for off-site employees to support scalable operations.	• Efficiency/Insight: Standardized data capture of timesheet data to enable accurate reporting and analysis • Efficiency/Effectiveness: Automated calculation of earning and statutory deductions • Efficiency: Reduced cycle time from employee timesheet entry to payment	Efficiency, Effectiveness, Insight	To build an efficient and effective company, transforming the current manual timesheet and payroll process is critical. Addressing this, provides the following strategic advantages: 1. Fraud Mitigation and Accuracy: Eliminating manual data entry significantly reduces the possibility of overpaying/ underpaying employees. 2. Risk Management: Replacing informal data transfers with a structured process reduces the possibility of data leakages between timesheet entry and payroll processing. Data breaches are costly and can damage the

				company's reputation. 3. Productivity Recovery: By removing the manual calculations and data entry from managers and back-office employees, the company reclaims "lost hours" that can be redirected towards other business activities. 4. Reduce Payroll Cycle Times: Allowing data to flow quickly into and through timesheets reduces the time for payroll processing.
Limited reporting capabilities and fragmented information limits the Company's insights.	Enhance visibility into business operations to enable better decision making at all management levels.	Efficiency/Insight/Resilience: Centralized access to standardized data reports and advanced analytics across various business areas	Efficiency, Insight, Resilience	To build a more efficient and resilient company, data can be leveraged to benefit the company in the following ways: 1. Data-Driven Decision: We eliminate reliance on intuition. High availability reporting ensures that all strategic decisions are data driven, resulting in more positive outcomes. 2. Productivity Recovery: By removing the need to manually transfer data between systems, the company reclaims "lost hours"

				3. Innovation: Providing consolidated, high-quality data removes the main barrier to AI adoption. The company gains the ability to implement cutting-edge initiatives like generative AI and predictive analytics. 4. Competitive Advantage: Moving ahead with leading data analytics provides invaluable insights that push the company ahead of its competitors.
